# Welcome to Procreate!

This is the Gallery:
It's the first thing you see when you open the app

The "Select" button allows you to select one or more canvases
Once you select a canvas the options for preview, share, duplicate and delete will be available

The "Import" and "Photo" button lets you bring in files and photos as canvases

The magic wand will give you options to adjust the hue saturation and brightness and also add affects like glitching and various blur

The Ribbon button will let you freehand a shape to copy/paste- then pressing the mouse button will allow you to move the shape among other actions

The colored circle allows you to pick your color from a variety of menus

This button will bring up your layers

The brush button will open up a menu that allows you to choose your brush
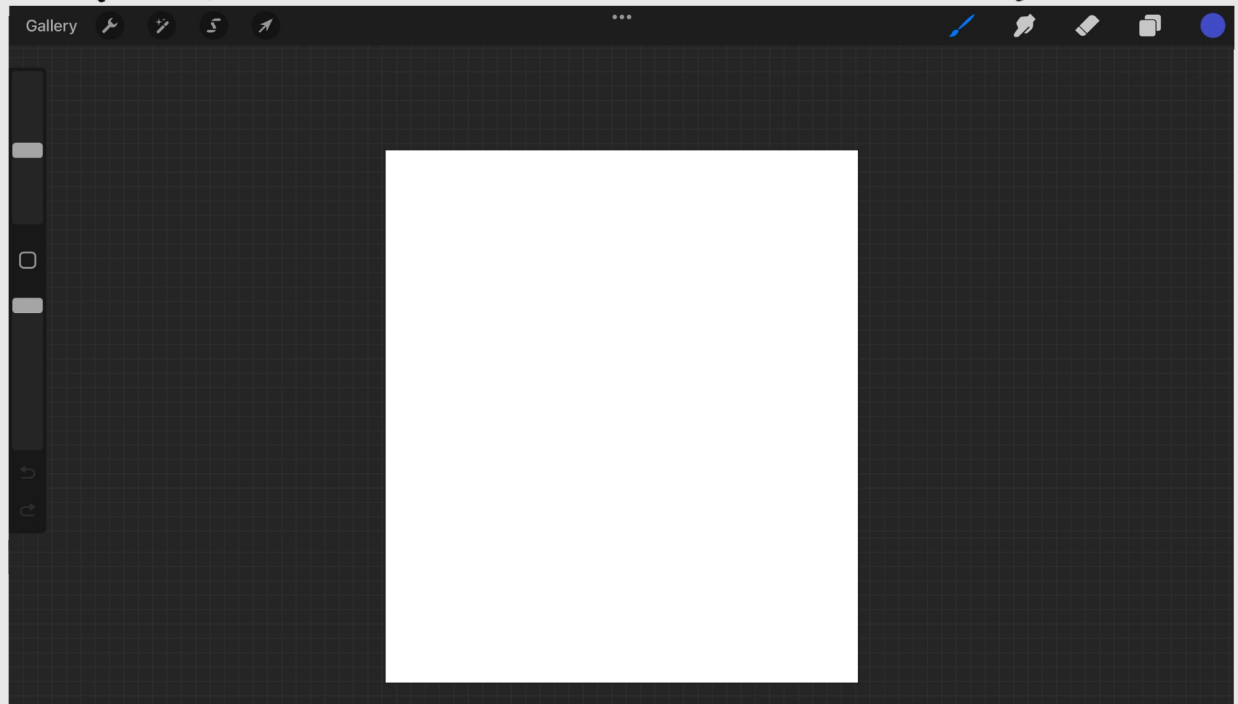

The finger button activates your smudge tool

The eraser button will activate your eraser

The wrench button will bring up a menu in which you can add a photo or text as well as other actions

The Gallery button will bring you back to the Gallery

These sliders let you adjust the size of the brush (top) and adjust the opacity (bottom)

This is a just a rundown of the basic controls of procreate; there are many tips and tricks that you can discover for yourself or schedule an appointment with a tutor!
